As citizens, we should have a say to where these cell towers and towers under 15m are placed. The telecommunication industry has total disregard to the citizens of this country in which they hide behind Industry Canada. Industry Canada needs to update their Safety Code 6 which does not address long-term effects of electromagnetic fields radiation. There are lots of indications that this type of radiation is harmful to us as humans. Industry Canada should take a very conservative approach similar to the Bio-initiative report adopting a safe limit of 1000 microwatts per square meter outdoor exposure not Safety Code 6 of 10 million for the maximum of 6 minutes exposure
