Subject: Consultation on Amendments to Industry Canada’s Antenna Tower Siting Procedures CPC-2-0-03 (Canada Gazette, Part I, February 27, 2014)

I am writing to express my concerns about the proposed amendments to Industry Canada’s Antenna Tower Siting Procedures CPC-2-0-03.

Non-tower structures (building-mount, roof-top, hydro-pole, utility pole, etc. installations) should be included in the notification and consultation process.

Any changes to current towers/antennae which would result in an increase of RF output of the structure by more than 25% should be included in the notification and consultation process.

Also, the distance around a tower that requires notification as per section 5.2 (Public Consultation Process) should be increased from 3 times the tower height, to 10 times.

I strongly believe that Industry Canada has an important role to play in ensuring that there are no unintended public health impacts from any changes to CPC-2-0-03.

Yours sincerely,

Erin Hill
