Hello,

I would like to have advanced notification for when cellular towers are proposed for my area. Also, I think it's extremely important to keep cell towers and antennas well away from schools and daycare centres. As much as possible I believe cell antennas should be kept away from residential neighbourhoods and the specific height of the antennas should be chosen to best protect public health. In an ideal world it would be fantastic for multiple telecommunication companies to share the same network and therefore minimize unnecessary exposure. Anything and everything that can be done for public safety should be a priority. Many thanks!
