There should be public notification and CONSULTATION on ALL antennae – not just new ones. Approval by those affected by antennae on existing structures – churches, office buildings, apartment buildings, etc – should be required. Everyone within 2 city blocks should be told about nearby antennae, even if the municipality where it is located does not have a consultation policy. There should be NO antennae located within 500 km from any school or daycare.

Our government should be protecting the citizens rather than the interests of industry. The science that tells us these invisible waves are safe is the same kind of science that told us tobacco was safe, DDT was safe, lead paint was safe, Thalidomide was safe…
