We believe that Governments should encourage network investments rather than putting in place policies that discourage them. Innovation requires companies to make significant investments in network infrastructure. These investments are key to unlocking wireless and fixed broadband to support economic growth. Our Government has to update their telecom policy to enable and encourage broadband investments in the communities that need it. We are currently working with a very large Toronto area Regional Municipality to promote broadband investments in their communities to grow the economy and benefit residents. We also assisted in fundraising to develop a Telecommunication Policy that will provide public access for libraries and municipal rights of way access for hydro networks.

CRTC 2015-226 - Petition to the Government in Council concerning the Telecommunications Policy

Canada Gazette, Part I, November 21, 2015, Notice No. DGTP.
CRTC's decision.

Canadian Government to support broadband infrastructure investment by revising the development of Canada's world class communication services. We encourage the negative effect on fibre network investments, which in turn would negatively impact the

We support Bell's request to overturn the CRTC's decision as we believe it will have a
